PRME SIP REPORT

Technology Initiative towards Environmental Sustainability
“Aldersgate College sustains its value through developing the power of reason, to liberate people from ignorance, penury, and hopelessness and empower them to commence their own journey for social and economic transformation and spiritual salvation. Thus our goal is to make environmental sustainability a way of thinking, a way of doing business, a way of promoting economic development without incurring environmental damage, in essence, a way of life that insures our well-being and that of all the generations to come. This will be inducted in all our curriculums and in teacher trainings so that the value of its true meanings can be delivered through various forms of teaching methodology for student centric learning. Aldersgate will further accomplish this goal through research, training, public outreach, and much more. As a signatory to PRME, Aldersgate College will become one of the best places within the Philippines to conduct or sponsor research in environmental sustainability because it brings together through its Association the ICCAPI some of the best researchers, environmental research institutions and industry players in the world through to tackle problems in environmental sustainability. Whether in grade school, high school, college, business, industry or media, if someone is looking for information on environmental sustainability, Aldersgate College will be the place to go for the most up-to-date and reliable information on the issue.”

Associate Professor Dr Don Prasad
Vice-president-International

Aldersgate Christian Child Centre Initiative

In Dec 2018, Aldersgate Christian Child Center was created by the Integrated Child Development Center of Aldersgate College in partnership with ChildFund Japan. The Center works with 200 Sponsored Families and Sponsored Children in three remote rural villages of Quezon Nueva, Vizcaya. Considering the 200 children as the heart of the program, ACCC utilizes a holistic approach that addresses the children’s intellectual, physical, psycho-social/emotional and spiritual needs by also simultaneously considering the development issues involving the children’s families and their community.

Child Development

The Center aims for the full development of the child’s physical, spiritual, social and intellectual potentials by providing formal and non-formal educational assistance to children and youth, value formation, social skills, arts and sports and assisting the youth in their advocacy as child rights Advocates.

Family Development

It seeks to build, enhance and strengthen the parents’ capacities to assume the basic responsibilities for the survival, protection, participation and development of all the members of the family through health programs, livelihood and skills training and responsible parenthood formation programs.

Institution building

It builds and strengthens community-based sustainable structures with proven capabilities to respond to the needs and issues of children alongside community problems by establishing people’s organizations; and building partnerships with the Barangay Local Governments.
This seminar was specially conducted by Dr Sunny, to provide students with the insights to Sustainable Development issues at hand and how as students they should engage themselves through the real life projects to engage and plan in sustainable development practices to their respective chosen organization. There was great interaction and practical case studies looked at with specifics to the 7 sustainable goals that were originally conceived by the United Nations.

Aldersgate College Medical Mission

Hundreds of students and pupils of selected elementary and high schools in Solano were given free health education by the BSN students under the supervision of their clinical instructors this year SY 2018-2019. The School of Medical Sciences is actively involved in medical missions conducted in the different areas, elementary schools and high schools in the municipality of Solano to those who need health services. The activities were in coordination with the School Nurse and the School Administrators. The team likewise conducted interviews and conference with parents of pupils and students to ensure the continuous follow-up and administration of the initiated health education to their children. “The ultimate goal of this health education is to improve the health of the individual and the community. Everyone needs health education to the young and old, men and women, educated and illiterate as it works to improve the alertness and raise the level of interest and awareness among all segments of society,” said Mrs. Leticia Serrano, one of the Clinical Instructors, in an interview. The Physical Assessment of the school children being conducted by the BSN 3 students during the medical mission with the guidance of the Clinical Instructor at Solano East Elementary School.
